

Amandin B

Name of vine variety in France

Amandin

Origin

This variety was obtained in 1979 by INRA. It is derived from the interspecific crossbreeding of 7489 Inra Bdx and Muscat de Hambourg N.

Synonymy

There is no officially recognized synonym in France nor in other countries in the European Union.

Regulations

In France, Amandin B is officially listed in the "Catalogue of vine varieties".

Use

Variety exclusively for amateurs and private domestic use.

Evolution of area under vines in France

Description

Identification signs include:

- the tips of the young shoot have a sparse to moderate coat of flat-lying hairs,
- the young leaves are shiny and green with bronze or reddish patches,
- adult leaves are wedge shaped, whole or 3 or 3-lobed with an open petiolar sinus, moderate to long teeth compared to width at base, straight sides, absence or slight anthocyanin pigmentation of veins; smooth leaf blade, involuted and the underside with an absence or very slight coat of upright hairs and slight coat of upright hairs,
- elliptical or ovate shaped berries with a slight muscat flavor.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	133	229	247	176	186	256	240	235	255
Allel 2	143	236	249	186	192	262	254	243	271

Phenology

Bud burst: 6 days after Chasselas. Grape maturity: period I, 1 week after Chasselas.

Suitability for cultivation and agronomic production

Amandin B displays moderate to strong vigor. This variety is fairly fertile and has semi-erect to horizontal growth. Amandin B can be managed by moderately long pruning and must be trained.

Sensitivity to diseases and pests

Amandin B is not very sensitive to downy mildew, powdery mildew, anthracnosis, black rot and grey rot, but it must be grafted.

Technological potential

Amandin B grape clusters are moderate to large size, not very compact and the berries are moderate size, juicy with a thick skin.

Clonal selection in France

The only approved Amandin B clone carries the number 5002.
