Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostate hairs,
- the young leaves that are bronze or reddish,
- the large circular adult leaves, with five, seven or more than seven lobes, U or club-shaped lateral sinuses, a slightly open or close U-shaped petiole sinus, large teeth, medium length compared to their width at the base with straight or convex sides, a strong anthocyanin coloration of veins, a strongly blistered involute leaf blade, and on the lower side of the leaves, a medium to high density of erect and prostate hairs,
- the ellipsoid berries.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	133	232	247	176	188	248	240	257	249
Allel 2	149	234	249	180	204	248	244	257	271

Phenology

Bud burst: 12 days after Chasselas.

Grape maturity: late-season, 5 weeks after Chasselas.

Suitability for cultivation and agronomic production

Dabouki is a vigorous variety with a horizontal bearing. Its production potential is average. It can be managed with short or moderate long pruning. Dabouki resists well against drought and is not very affected by coulure and millerandage.

Susceptibility to diseases and pests

Under humid weather conditions, Dabouki is sensitive to downy mildew, powdery mildew and to grey rot.

Technological potentiality

The bunches are large to very large and moderately compact. The berries are also very large, simple-flavored, with a thick skin and a fleshy pulp. This variety has a good storage and transport capacity.

Clonal selection in France

The only certified Dabouki clone carries the number 1103.
