

Danam B

Name of vine variety in France

Danam

Origin

This variety was obtained in 1958 by INRA by crossbreeding Dabouki B and Muscat de Hambourg N.

Synonymy

No synonym is officially recognized in France, nor in other countries of the European Union.

Regulations

In France, Danam B is officially listed in the "Catalogue of vine varieties".

This variety is likewise listed in the Catalogue of Portugal.

Use

Table grape variety

Evolution of area under vines in France

Description

Identification signs include:

- the tip of the young shoot has a slight to moderate coat of flat-lying hairs,
- the young leaves are green with bronze patches,
- adult leaves are orbicular-shaped, 5 lobes with a U-shaped petiolar sinus, open to parallel edges, long teeth with straight sides, absence of anthocyanin pigmentation of veins, strongly bubbled leaf blade, jagged and the underside with an absence or vert slight coat of upright and flat-lying hairs,
- short elliptical-shaped berries

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	147	229	249	180	186	240	244	235	271
Allel 2	149	232	249	182	188	248	254	257	271

Phenology

Bud burst: 5 days after Chasselas.
Grape maturity: period II, 3 weeks after Chasselas.

Suitability for cultivation and agronomic production

Danam B displays moderate to strong vigor. It is not very affected by coulure and millerandage and it is generally short pruned.

Sensitivity to diseases and pests

Danam B is not very prone to rot.

Technological potential

The grape clusters are very large. The berries are likewise very large with a thick skin and a simple flavor pulp. The yield potential is high and it can be transported fairly well.

Clonal selection in France

The only approved Danam B clone carries the number 498.
