

Feunate N

Name of vine variety in France

Feunate

Origin

This vine variety would appear to originally be from the Drôme region. Based on published genetic analyses, Feunate N probably descends from Gouais B.

Synonymy

No synonym is officially recognized in France, nor in other countries of the European Union.

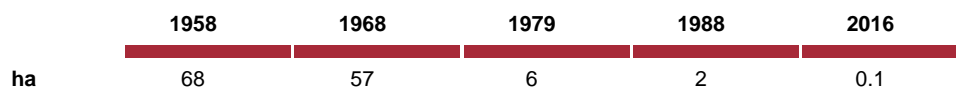

Regulations

In France, Feunate N is officially listed in the "Catalogue of vine varieties"

Use

Wine vine variety

Evolution of area under vines in France

Description

Identification signs include:

- the tips of the young shoot have a heavy coat of flat-lying hairs,
- the young leaves are green with bronze patches,
- the shoots have red internodes,
- adult leaves are whole, 3 or 5 lobes with a closed petiolar sinus and overlapping lobes, shallow lateral sinuses with a U-shaped base, long teeth with straight sides, slight anthocyanin pigmentation of veins, flat leaf blade and upturned on edges and the underside with a moderate coat of flat-lying hairs,
- elliptical-shaped berries.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	236	239	176	188	244	238	245	249
Allel 2	141	238	243	178	196	256	254	247	271

Phenology

Bud burst: 2 days after Chasselas.
Grape maturity: period II, 3 weeks after Chasselas.

Suitability for cultivation and agronomic production

Feunate N is vigorous, fertile and productive and grows upright and must be short pruned.

Sensitivity to diseases and pests

Feunate N displays no particular sensitivity to downy and powdery mildew, but appears somewhat sensitive to grey rot.

Technological potential

Grape clusters are moderate to large and the berries are large. Feunate N produces colorful wines which are relatively acid with low alcohol level.

Clonal selection in France

The only approved Feunate N clone carries the number 1225.
Surveys have recently been carried out in vineyards in the Drôme region.
