Evolution of area under vines in France

Description

Identification signs include:

- the tips of the young shoots have a sparse to moderate coat of flat-lying hairs,
- the young leaves are green with bronze patches,
- the shoots have red stripes,
- wedge or heart-shaped adult leaves, 3 or 5 lobes with deep upper lateral sinuses and a slightly open V-shaped petiolar sinus; small to moderate size teeth with straight sides or with one convex and one concave side; slight anthocyanin coloration of veins; an upturned, jagged and bubbled leaf blade and the underside with a slight to moderate coat of upright hairs and an absence of flat-lying hairs,
- round-shaped or slightly elliptical-shaped berries.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	223	249	178	200	244	238	216	239
Allel 2	137	232	249	186	204	246	238	245	271

Phenology

Bud burst: 5 days after Chasselas. Grape maturity: period II, 2 and 1/2 weeks after Chasselas.

Suitability for cultivation and agronomic production

Genouillet N is moderately vigorous and should preferably be short pruned. The shoots grow semi-erect.

Sensitivity to diseases and pests

Genouillet N is susceptible to grey rot.

Technological potential

Genouillet N grape clusters are moderate size and compact and the berries are milkwise moderate size. This grape variety produces fresh, light, colored and pleasant wines.

Clonal selection in France

There are no approved clones for this vine variety at the present time.
