

## Goldriesling B

### Name of the variety in France

Goldriesling

### Origin

This variety was obtained by C. Oberlin and probably results from a crossbreeding between Riesling and Précoce de Malingre.

### Synonyms

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

### Legal information

In France, Goldriesling is officially listed in the "Catalogue of vine varieties" on the A list and classified. This variety is also listed in the catalogues of other Member States of the European Union: Austria, Denmark and Germany.

### Use

Wine grape variety.

### Evolution of cultivated areas in France

### Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of erect hairs,
- the green young leaves with bronze spots,
- the circular adult leaves, with three or five lobes, U-shaped lateral sinuses, a closed petiole sinus with slightly overlapping lobes, leaving a rounded light, medium teeth with convex or straight sides, a slight anthocyanin coloration of veins, a twisted leaf blade, and on the lower side of the leaves, a medium density of erect hairs,
- the round-shaped or broad ellipsoid berries.

## Phenology

Bud burst: same as Chasselas.

Grape maturity: early-season, 1 week after Chasselas.

## Suitability for cultivation and agronomic production

Goldriesling is not very vigorous. It is a good producer but rather sensitive to winter frost. Its early budburst also exposes it to spring frosts.

## Susceptibility to diseases and pests

Goldriesling is susceptible to downy mildew and grey rot. It is less affected by powdery mildew.

## Technological potentiality

The bunches and berries are small. Goldriesling produces average quality wines.

## Clonal selection in France

There is no certified clone for this variety yet.
