

Lledoner pelut N

Name of the variety in France

Lledoner pelut

Origin

This variety is a mutation of Grenache, particularly focused on villosity.

Synonyms

In Spain, Lledoner pelut is officially designated as "Garnacha Peluda". This synonym is officially recognized in France regarding plant propagation material.

Legal information

In France, Lledoner pelut is officially listed in the "Catalogue of vine varieties" on the A list and classified. This variety is also listed in the catalogue of Spain.

Use

Wine grape variety.

Evolution of cultivated areas in France

	1979	1988	1998	2008	2018
ha	212	625	584	534	286

Descriptive elements

The identification is based on:

- the tip of the young shoot with high density of prostate hairs,
- the green young leaves,
- the adult leaves with a slightly open or closed petiole sinus, with an sometimes a tooth on the edge, an elongated main lobe, a slightly blistered leaf blade, and on the lower side a low to medium prostate hairs,
- the slightly ellipsoid berries.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	135	223	239	191	188	258	240	243	239
Allel 2	143	238	243	191	188	258	254	243	249

Phenology

Bud burst: 8 days after Chasselas.

Grape maturity: late-season, 4 weeks after Chasselas.

Suitability for cultivation and agronomic production

This variety shares some of the characteristics and potential of Grenache. It is sometimes considered to be more vigorous and displays less susceptibility to coulure.

Susceptibility to diseases and pests

This variety's behavior towards the main diseases is the same as that of Grenache, except Lledoner pelut is more susceptible to mites.

Technological potentiality

The bunches and berries are medium in size. Lledoner has close potentials to those of Grenache, but with slightly lesser natural alcohol degree.

Clonal selection in France

The two certified Lledoner pelut clones carry the numbers 1055 and 1056.
