Evolution of area under vines in France

Description

Identification signs include:

- the tip of the young shoot has a dense cover of flat-lying hairs,
- the young leaves are green,
- orbicular-shaped adult leaves with 5 or 7 lobes, a slightly open U-shaped petiolar sinus, small to medium size teeth, short compared to width at base, straight sides; an absence of anthocyanin coloration of veins, a flat or slightly revolute leaf blade and the underside with a slight coat of flat-lying hairs,
- elliptical-shaped berries.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	223	239	186	188	246	240	233	261
Allel 2	149	229	247	188	194	252	248	235	271

Phenology

Bud burst: 2 days after Chasselas. Grape maturity: period II, 3 weeks after Chasselas.

Suitability for cultivation and agronomic production

Mècle N is fairly vigorous and can be long pruned. The shoots display semi-erect growth.

Sensitivity to diseases and pests

Mècle N is susceptible to grey rot.

Technological potential

Mècle N grape clusters and berries are moderate size. This grape variety produces tannic, slightly astringent, and moderately colored wines with average sugar potential.

Clonal selection in France

There are no approved clones for this vine variety at the present time.
