Wine vine variety

### Evolution of area under vines in France

### Description

Identification signs include:

- the tip of the young shoot has a very dense coat of flat-lying hairs,
- the young leaves are yellow,
- the shoot has a flattened or faciated internode cross section,
- adult leaves are light green, large, 5 lobes with a slightly open petiolar sinus or with slightly overlapping lobes frequently with a tooth on the edge, moderate size teeth with straight sides, an absence of anthocyanin coloration of veins, colored petioles; smooth leaf blade, shiny, upturned and the underside with a moderate coat of upright and flat-lying hairs,
- round-shaped berries.

## Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	141	225	239	176	186	252	240	247	249
Allel 2	143	238	243	191	188	258	254	257	271

## Phenology

Bud burst: 6 days after Chasselas. Grape maturity: period II, 3 and 1/2 weeks after Chasselas.

## Suitability for cultivation and agronomic production

Mayorquin B is very vigorous, fertile and productive and must be short-pruned. Mayorquin B is well adapted to dry, sandy and clay soils.

## Sensitivity to diseases and pests

Mayorquin B is especially susceptible to downy mildew. It displays little susceptibility to grey rot.

## Technological potential

The grape clusters and berries are very large. Mayorquin B produces ordinary, neutral and average wine.

## Clonal selection in France

The only approved Mayorquin B clone carries the number 1119.
