

Perdin B

Name of vine variety in France

Perdin

Origin

This vine variety was obtained in 1981 by INRA. It is derived from the interspecific crossbreeding of 7489 Inra Bdx and Perle de Csaba B.

Synonymy

Regulations

In France, Perdin B is officially listed in the "Catalogue of vine varieties".

Use

Variety exclusively for amateurs and private domestic use.

Description

Identification signs include:

- the tip of the young shoot has a slight coat of flat-lying hairs,
- the young leaves are green with bronze or reddish colored patches,
- orbicular adult leaves, 5 or 7 lobes with a petiolar sinus with overlapping lobes and a U-shaped base frequently limited by a vein near the petiolar point; short to moderate size teeth with straight sides, low to moderate anthocyanin coloration of veins; a moderately bubbled, jagged and upturned leaf blade, sometimes cupped and wavy near the petiolar point and the underside with an absence or very sparse coat of flat-lying hairs and a low to moderate coat of upright hairs,
- round-shaped or short elliptical shaped berries with a mucatée or aromatic flavor.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	229	247	176	202	256	240	245	271
Allel 2	143	234	260	186	204	262	240	267	271

Phenology

Bud burst: 1 day before Chasselas.
Grape maturity: period I, 1 week after Chasselas.

Suitability for cultivation and agronomic production

Perdin B displays moderate vigor. This vine variety grows semi-erect to horizontal and must be trained and can be short or long-pruned. Perdin B is a little susceptible to millerandage.

Sensitivity to diseases and pests

Perdin B is not very susceptible to downy mildew, powdery mildew and grey rot, but it must be grafted.

Technological potential

Perdin B grape clusters are moderate in size. The berries are likewise moderate in size, juicy with a thin skin.

Clonal selection in France

The only approved Perdin B clone carries the number 5003.
