Description

Identification signs include:

- the tip of the young shoot has a moderate to heavy coat of flat-lying hairs,
- young leaves have bronze patches,
- the shoots have red internodes,
- orbicular adult leaves, whole or with 3 lobes with a slightly open petiolar sinus or slightly overlapping lobes; very long teeth compared to width at base with straight sides; moderate anthocyanin coloration of veins, jagged leaf blade, cupped, bubbled, wavy between the principle veins and the underside with a sparse coat of upright and flat-lying hairs,
- round-shaped berries.

Allel 2	141	232	239	182	196	252	254	245	271

Phenology

Bud burst: 6 days after Chasselas.
Grape maturity: period II, 2 weeks after Chasselas.

Suitability for cultivation and agronomic production

Saint-Pierre doré B is moderately vigorous, rather productive and should be moderately long pruned.

Sensitivity to diseases and pests

Saint-Pierre doré B is extremely susceptible to grey rot but is however not very affected by powdery and downy mildew.

Technological potential

Grape clusters are large and the berries are moderate in size. Saint-Pierre doré B produces ordinary wine with low degree of alcohol and relatively acid which can also possibly be used as a base wine for sparkling wines.

Clonal selection in France

There are no approved clones for this vine variety at the present time.
