Description

Identification signs include:

- the tip of the young shoot has a heavy coat of flat-lying hairs,
- the young leaves have bronze patches,
- orbicular-shaped adult leaves, 5 or 7 lobes with a petiolar sinus with slightly overlapping lobes, moderate to long teeth, straight or convex sides; an absence of anthocyanin coloration of veins; jagged leaf blade, revolute and bubbled and the underside with a moderate coat of upright and flat-lying hairs,
- round-shaped berries.

Allel 2	141	236	249	182	204	256	266	257	261

Phenology

Bud burst: 3 days after Chasselas.
Grape maturity: period II, 3 weeks after Chasselas.

Suitability for cultivation and agronomic production

Téoulier N displays erect growth and can be gobelet trained and short-pruned. Its early bud burst exposes it to the risk of spring frost.

Sensitivity to diseases and pests

Téoulier N is fairly susceptible to powdery mildew.

Technological potential

Grape clusters and berries are large. Téoulier N produces deep color wines, but lacking in finesse and elegance. These wines are generally not very acid and have an average degree of alcohol.

Clonal selection in France

The only approved Téoulier N clone carries the number 1200.
