### Description

Identification signs include:

- the tips of the young shoots have an absence of flat-lying hairs,
- the young leaves are green,
- the shoots are green,
- wedge-shaped adult leaves, 3 or 5-lobed with an open and U-shaped base petiole sinus; shallow lateral sinuses, large teeth with straight or convex sides; absence of anthocyanin coloration of veins; bubbled leaf blade, jagged and the underside with an absence of flat-lying or upright hairs,
- elliptical-shaped berries.

## Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	133	223	239	182	186	244	254	233	251
Allel 2	133	234	249	182	188	252	254	267	257

## Phenology

Bud burst: 8 days after Chasselas. Grape maturity: period I, 1 and 1/2 weeks after Chasselas.

## Suitability for cultivation and agronomic production

Victoria B has strong vigor and a semi-erect horizontal growth. This variety must be trellised and can be short or long-pruned.

## Sensitivity to diseases and pests

Victoria B is not very sensitive to grey rot.

## Technological potential

Victoria B grape clusters are moderate to large, moderately compact with a good presentation. The berries are large with thick skins and juicy pulp.

## Clonal selection in France

The 2 approved Victoria B clones carry the numbers 6009 and 6010.
