

Calitor N

Name of the variety in France

Calitor

Origin

Calitor is originally from Provence.

Synonyms

In France, this variety can officially be called "Pécoui touar" regarding plant propagation material.

Legal information

In France, Calitor is officially listed in the "Catalogue of vine varieties" on the A list and classified.

Use

Wine grape variety.

Evolution of cultivated areas in France

	1958	1968	1979	1988	2000	2008	2018
ha	299	319	195	204	60	40	11

Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostate hairs,
- the yellow young leaves with bronze spots,
- the adult leaves with five lobes, a slightly open petiole sinus or with slightly overlapping lobes, long teeth compared to their width at the base with straight sides, no anthocyanin coloration of veins, a twisted, involute leaf blade, and on the lower side of the leaves, a medium to high density of erect and prostate hairs,
- the round-shaped berries.

Allel 2	131	236	249	182	204	252	240	235	255

Phenology

Bud burst: 8 days after Chasselas.
Grape maturity: late-season, 4 weeks after Chasselas.

Suitability for cultivation and agronomic production

Calitor is fertile, productive and can be pruned short.

Susceptibility to diseases and pests

Calitor is susceptible to downy mildew and grey rot. On the other hand, it resists very well to powdery mildew.

Technological potentiality

The bunches and berries are large. Calitor produces light, flat, not very colored wines that are lacking acidity.

Clonal selection in France

There is no certified clone for this variety yet.
