

## Danam B

### Name of the variety in France

Danam

### Origin

This variety was obtained in 1958 by INRA by crossbreeding Dabouki and Muscat de Hambourg.

### Synonyms

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

### Legal information

In France, Danam is officially listed in the "Catalogue of vine varieties" on the A list. This variety is also listed in the catalogue of Portugal.

### Use

Table grape variety.

### Evolution of cultivated areas in France

### Descriptive elements

The identification is based on:

- the tip of the young shoot with a low to medium density of prostate hairs,
- the green young leaves with bronze spots,
- the circular adult leaves, with five lobes, an open or with parallel edges U-shaped petiole sinus, long teeth with straight sides, no or a weak anthocyanin coloration of veins, a strongly blistered twisted leaf blade, and on the lower side of the leaves, no or a very low density of erect and prostate hairs,
- the broad ellipsoid berries.

### Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	147	229	249	180	186	240	244	235	271
Allel 2	149	232	249	182	188	248	254	257	271

## Phenology

Bud burst: 5 days after Chasselas.

Grape maturity: mid-season, 3 weeks after Chasselas.

## Suitability for cultivation and agronomic production

Danam displays moderate to strong vigor and is generally pruned short. It is not very affected by coulure and millerandage.

## Susceptibility to diseases and pests

Danam is not very susceptible to rot.

## Technological potentiality

The bunches are very large. The berries are also very large with a thick skin and a simple-flavored pulp. The yield potential is high and it has a good transport capacity.

## Clonal selection in France

The only certified Danam clone carries the number 498.
