### Evolution of cultivated areas in France

### Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the green young leaves with bronze spots,
- the shoots with red internodes,
- the small dark green adult leaves, with five or seven lobes, deep lateral sinuses, with an open or slightly open U-shaped petiole sinus with naked petiole veins, long teeth compared to their width at the base with straight sides, strong anthocyanin coloration of veins, a revolute blistered leaf blade, and on the lower side of the leaves, a low to medium density of erect and prostrate hairs,
- the broad ellipsoid berries.

## Genetic profile

Allel 2	131	234	253	186	200	260	248	243	261

## Phenology

Bud burst: 2 days before Chasselas.

Grape maturity: mid-season, 2 weeks and a half to 3 weeks after Chasselas.

## Suitability for cultivation and agronomic production

Genovèse is a vigorous variety, not very productive which must be trained. It is generally pruned long.

## Susceptibility to diseases and pests

Genovèse does not seem particularly susceptible to the main fungal diseases.

## Technological potentiality

The bunches are small to medium in size and the berries are medium in size. Genovèse has a good sugar accumulation potential. It produces characteristic white wines, that are typical, elegant, with a nice balance between alcohol and acidity.

## Clonal selection in France

The only certified Génovèse clone carries the number 1133.
