

Gibert N

Name of the variety in France

Gibert

Origin

Gibert seems to come from the French department Lot. Based on recent genetic analyses carried out in Montpellier, it would result from the crossbreeding of Cot and Colombaud.

Synonyms

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Legal information

In France, Gibert is officially listed in the "Catalogue of vine varieties" since 2018 on the A list and classified.

Use

Wine grape variety.

Evolution of cultivated areas in France

Descriptive elements

The identification is based on:

- the white tip of the young shoot with a high density of prostate hairs,
- the white then yellow young leaves, with a high density of prostate hairs,
- the shoots with red-striped internodes,
- the medium to large adult leaves, with five or seven lobes, a closed or with overlapping lobes petiole sinus, medium length teeth compared to their width at the base with straight sides, no or a very weak anthocyanin coloration, a flat, finely blistered leaf blade, and on the lower side of the leaves, a low density of prostate hairs,
- the slightly ellipsoid berries.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	223	243	182	186	240	238	233	239
Allel 2	131	225	262	188	202	260	266	257	239

Phenology

Bud burst: 9 days after Chasselas.

Grape maturity: late-season, 4 weeks to 4 weeks and a half after Chasselas.

Suitability for cultivation and agronomic production

Gibert is a vigorous and very productive variety, with a semi-erect bearing. As its bud burst is rather late, this variety is not very affected by spring frosts.

Susceptibility to diseases and pests

Gibert is not very susceptible to downy mildew.

Technological potentiality

Gibert's bunches are medium to large in size and compact. The berries are medium to large, with a simple flavor, a moderately thick skin and a juicy pulp. This variety can be vinified as red or rosé wines. Gibert wines are easy to drink, fresh, light, with floral aromas, low alcohol degree and low anthocyanins. They are not suitable for ageing.

Clonal selection in France

There is no certified clone for this variety yet. A conservatory of 5 clones was planted in 2012 at the Departmental Farm of Anglars-Juillac in the French department of Lot.
