

Ignea Rs

Name of the variety in France

Ignea

Origin

Ignea or 185 Pirovano was obtained by Angelo Pirovano (Italy) by crossbreeding 46 Pirovano and 2 Pirovano.

Synonyms

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Legal information

In France, Ignea was officially listed in the "Catalogue of vine varieties" on the A list.

Use

Table grape variety.

Evolution of cultivated areas in France

Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostate hairs,
- the green young leaves with bronze spots,
- the circular entire adult leaves, with an open V-shaped petiole sinus, small teeth with straight sides, no anthocyanin coloration, a slightly revolute, finely blistered leaf blade, and on the lower side of the leaves, no or a very low density of erect hairs and a low density of prostate hairs,
- broad ellipsoid berries.

Allel 2	141	234	251	191	204	258	254	243	263

Phenology

Bud burst: 10 days after Chasselas.
Grape maturity: mid-season, 3 weeks after Chasselas.

Suitability for cultivation and agronomic production

Ignea displays low to moderate vigor.

Susceptibility to diseases and pests

Ignea is fairly susceptible to grey rot, powdery and downy mildew.

Technological potentiality

The bunches are medium to large in size, not very compact. The berries also are medium to large with a thick skin, fleshy pulp and a simple flavor. Ignea has a good storage and transport capacity.

Clonal selection in France

There is no certified clone for this variety yet.
