Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the yellow and shiny young leaves,
- the circular adult leaves, with five lobes, an open, slightly open or closed U-shaped petiole sinus, large teeth with convex sides, no anthocyanin coloration of veins, a slightly blistered leaf blade, involute, curly on the edges, and on the lower side of the leaves, a low density of erect and prostrate hairs,
- the ellipsoid berries with a slightly muscat or a simple flavor.

Phenology

Bud burst: 5 days after Chasselas.
Grape maturity: late-season, 4 weeks after Chasselas.

Suitability for cultivation and agronomic production

Italia has very strong vigor and a semi-erect bearing. This variety must be trained and pruned long.

Susceptibility to diseases and pests

Italia is sensitive to downy mildew and grey rot.

Technological potentiality

The bunches are very large, conical-shaped, moderately compact with large to very large berries. The skins are moderately thick with a firm and juicy pulp and the berries have a pleasant flavor. Italia has a good storage and transport capacity.

Clonal selection in France

The four certified Italia clones carry the numbers 307, 784, 858 and 918.
