### Descriptive elements

The identification is based on:

- the tip of the young shoot with a very low density of prostate hairs,
- the reddish young leaves, with no or a very low density of erect and prostate hairs,
- the shoots with red internodes,
- the circular adult leaves, with three or five lobes, an open V- or brace-shaped petiole sinus, large teeth, moderately long compared to their width at the base with straight or convex sides, no anthocyanin coloration of veins, an involute, very slightly blistered leaf blade, and on the lower side of the leaves, no or a very low density of erect and prostate hairs,
- the ellipsoid berries.

## Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	229	243	186	186	258	240	235	255
Allel 2	141	234	251	186	194	262	248	267	263

## Phenology

[drafting underway]

## Suitability for cultivation and agronomic production

Lilla has a semi-erect or erect bearing. This variety is rather productive, but it is sometimes susceptible to millerandage.

## Susceptibility to diseases and pests

Lilla is rather sensitive to cryptogamic diseases (downy mildew, powdery mildew, grey rot).

## Technological potentiality

Lilla's bunches are medium to large and moderately compact. The berries are large, simple-flavored, with a thin skin and a firm and not very juicy pulp.

## Clonal selection in France

There is no certified clone for this variety yet.
