

Mècle N

Name of the variety in France

Mècle

Origin

This variety is originally from the Isère region.

Synonyms

In France, this variety can officially be called "Mesclé" regarding plant propagation material.

Legal information

In France, Mècle is officially listed in the "Catalogue of vine varieties" on the A list and classified.

Use

Wine grape variety.

Evolution of cultivated areas in France

Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the green young leaves,
- the circular adult leaves, with five or seven lobes, a slightly open U-shaped petiole sinus, small to medium teeth, short compared to their width at the base with convex sides, no anthocyanin coloration of veins, a flat or slightly revolute leaf blade, slightly curly on the edges, and on the lower side of the leaves, a low density of prostrate hairs,
- the ellipsoid berries.

Allel 2	149	229	247	188	194	252	248	235	271

Phenology

Bud burst: 2 days after Chasselas.
Grape maturity: mid-season, 3 weeks after Chasselas.

Suitability for cultivation and agronomic production

Mècle is fairly vigorous and can be pruned long. Shoots have a semi-erect bearing.

Susceptibility to diseases and pests

Mècle is susceptible to grey rot.

Technological potentiality

Mècle's bunches are small to medium in size and the berries are medium. This variety produces tannic, well structured, and colored wines. The sugar accumulation potential of this variety is average.

Clonal selection in France

There is no certified clone for this variety yet.
