Descriptive elements

The identification is based on:

- the tip of the young shoot with a low density of prostate hairs,
- the light green young leaves with no erect hairs,
- the shoots with green or red-striped internodes,
- the small to medium, pentagonal adult leaves, with three or five lobes, moderately deep upper lateral sinuses, an open U-shaped petiole sinus, medium to long teeth compared to their width at the base with convex or straight sides, no anthocyanin coloration of veins, a flat, sometimes twisted and finely blistered leaf blade, and on the lower side of the leaves, no erect and prostate hairs,
- the round-shaped or slightly ellipsoid berries that can become golden or slightly pigmented when fully ripe.

Genetic profile

Allel 1	131	223	247	182	194	248	238	243	239
Allel 2	131	225	249	186	200	252	240	267	261

Phenology

Bud burst: 2 days before Chasselas.

Grape maturity: early-season, 2 weeks after Chasselas.

Suitability for cultivation and agronomic production

Rèze is has a low to moderate vigor and a semi-erect bearing. Its fertility may sometimes be irregular.

Susceptibility to diseases and pests

Rèze is sensitive to grey rot.

Technological potentiality

Rèze's bunches are small to medium in size et moderately compact. The berries are medium, simple-flavored, with a moderately thick skin and a juicy pulp. The wines are quite neutral, light, lively, acidic and with white flowers, spice or resinous trees aromas.

Clonal selection in France

There is no certified clone for this variety yet.
