

Phenology

Bud burst: 4 days after Chasselas.
Grape maturity: early-season, 1 week after Chasselas.

Suitability for cultivation and agronomic production

Recybel is vigorous, not very productive and has a horizontal bearing. This variety is sensitive to coulure.

Susceptibility to diseases and pests

Recybel is resistant to powdery mildew and it is not very sensitive to downy mildew. It is however very susceptible to phomopsis.

Technological potentiality

Recybel's bunches are medium in size and loose. The berries are also medium, with a slight muscat flavor, a thin skin and a moderately juicy pulp. There are seeds but they are not very noticeable. The juice yields are rather low, but Recybel juices are of good quality, aromatic and balanced.

Clonal selection in France

The only certified Recybel clone carries the number 1332.
