

Reine des Vignes B

Name of the variety in France

Reine des Vignes

Origin

This variety was obtained in 1916 by Jean Mathiasz in Hungary by crossbreeding Dattier de Beyrouth and Perle de Csaba.

Synonyms

In the European Union, Reine des Vignes is officially called by other names: Königin der Weingärten (Austria), Kraljica vinograda (Croatie), Regina dei vigneti (Italy), Reina de las Viñas (Spain) and Szoloskertek királynője (Hungary). These synonyms are officially recognized in France regarding plant propagation material.

Legal information

In France, Reine des Vignes is officially listed in the "Catalogue of vine varieties" on the A list. This variety is also listed in the catalogues of other Member States of the European Union: Austria, Croatia, Hungary, Italy, Portugal and Spain.

Use

Table grape variety.

Evolution of cultivated areas in France

Descriptive elements

The identification is based on:

- the tip of the young shoot with a low density of prostate hairs,
- the green young leaves with bronze spots,
- the circular adult leaves, entire or with three or five lobes, with shallow lateral sinuses, an open U-shaped petiole sinus, medium teeth with straight or convex sides, those corresponding to the main veins are a little longer, no or a very weak anthocyanin coloration of veins, a smooth slightly twisted leaf blade, and on the lower side of the leaves, a low density of erect hairs and no or a very low density of prostate hairs,
- the ellipsoid berries with a muscat or simple flavor.

Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	223	247	176	186	252	240	233	271
Allel 2	133	234	249	182	204	256	254	267	271

Phenology

Bud burst: 3 days before Chasselas.

Grape maturity: very early season, half a week before Chasselas.

Suitability for cultivation and agronomic production

Reine des Vignes is a weak variety with a semi-erect or horizontal bearing. This variety is susceptible to millerandage and can be pruned short or long. Reine des Vignes tends to produce many grappillons.

Susceptibility to diseases and pests

Reine des Vignes is susceptible to grey rot, downy and powdery mildew.

Technological potentiality

The bunches are medium to large size and moderately compact. The berries are large with a juicy pleasantly flavored pulp.

Clonal selection in France

There is no certified clone for this variety yet.
