

## Riminèse B

### Name of the variety in France

Riminèse

### Origin

This variety is found in Corsica and corresponds to the Italian variety, Albana.

### Synonyms

In Italy, Riminèse is officially designated as "Albana". This synonym is officially recognized in France regarding plant propagation material.

### Legal information

In France, Riminèse is officially listed in the "Catalogue of vine varieties" on the A list and classified.

### Use

Wine grape variety.

### Evolution of cultivated areas in France

	1958	2018
ha	35	3.3

### Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostate hairs
- the young leaves with bronze spots,
- the shoots with red internodes,
- the pentagonal adult leaves, with five lobes, a petiole sinus with slightly overlapping lobes, short to medium teeth with straight sides, a moderate to strong anthocyanin coloration of veins, a revolute leaf blade, and on the lower side of the leaves, a medium density of erect and prostate hairs,
- the round-shaped or slightly obloid berries.

## Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	131	223	247	176	194	252	240	233	249
Allel 2	141	229	249	186	200	252	254	235	271

## Phenology

Bud burst: 14 days after Chasselas.

Grape maturity: mid-season, 2 weeks and a half after Chasselas.

## Suitability for cultivation and agronomic production

Riminèse is very vigorous and displays a horizontal or drooping bearing. It must be pruned long and trellised.

## Susceptibility to diseases and pests

Riminèse does not seem particularly susceptible to diseases.

## Technological potentiality

The bunches and berries are medium to large size. Riminèse has a good sugar accumulation potential. This variety produces pale, slightly aromatic, well balanced, white wines, which are suited to ageing.

## Clonal selection in France

The only certified Riminèse clone carries the number 1151.
