Use

Wine and spirits grape variety.

Evolution of cultivated areas in France

Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the young leaves with bronze spots,
- the circular, dark green adult leaves, with five or seven lobes, deep lateral sinuses, a slightly open petiole sinus or with slightly overlapping lobes, long teeth compared to their width at the base with straight sides, a weak anthocyanin coloration of veins, a twisted blistered leaf blade, and on the lower side of the leaves, a medium density of prostrate hairs,
- the round-shaped berries.

Genetic profile

Allel 1	131	223	239	176	186	244	240	247	271
Allel 2	149	229	249	178	194	252	248	267	271

Phenology

Bud burst: 23 days after Chasselas.

Grape maturity: mid-season, 3 weeks to 3 weeks and a half after Chasselas.

Suitability for cultivation and agronomic production

Select is a variety with late budburst which is not susceptible to spring frosts. It is moderately vigorous and must be pruned long.

Susceptibility to diseases and pests

Select is not very susceptible to grey rot.

Technological potentiality

The bunches are large and the berries are medium in size. Select produces average quality wines, which can be distilled to produce good quality spirits.

Clonal selection in France

There is no certified clone for this variety yet.
