

## Tressot N

### Name of the variety in France

Tressot

### Origin

This variety would be originally from the Yonne region.

### Synonyms

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

### Legal information

In France, Tressot is officially listed in the "Catalogue of vine varieties" on the A list and classified.

### Use

Wine grape variety.

### Evolution of cultivated areas in France

### Descriptive elements

The identification is based on:

- the tip of the young shoot with a high density of prostate hairs,
- the green young leaves with bronze spots,
- the adult leaves with five lobes, deep lateral sinuses with sometimes a tooth inside, a closed petiole sinus with very overlapping lobes, short teeth compared to their width at the base, no anthocyanin coloration of veins, a twisted, goffered leaf blade, folded and sometimes undulate near the petiole sinus, and on the lower side of the leaves, a low to medium density of erect and prostate hairs,
- the round-shaped berries.

### Genetic profile

Microsatellite	VVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allel 1	137	223	239	176	194	246	238	216	239
Allel 2	141	236	249	186	200	256	254	267	239

## Phenology

Bud burst: 8 days after Chasselas.

Grape maturity: mid-season, 2 weeks and a half after Chasselas.

## Suitability for cultivation and agronomic production

Tressot is generally pruned long and trellised.

## Susceptibility to diseases and pests

Tressot is particularly susceptible to powdery mildew.

## Technological potentiality

The bunches are medium in size and the berries are small. Tressot produces rather colored, full-bodied and warm wines.

## Clonal selection in France

There is no certified clone for this variety yet.
